PROJECTS

Student Result Management System

- Bootstrap, CSS, PHP, SQL, HTML
- A Student Result Management System (SRMS) is a software application designed to manage, track, and report the academic performance of students in educational institutions. The primary purpose of an SRMS is to streamline the process of recording, analyzing, and distributing student grades and other academic information.

School Website

- HTML, CSS, Javascript

Conference Management System

- HTML, CSS, Javascript, Php, SQL
- Type: CRUD Web Application
- Description: Developed a Conference Management System to streamline event planning and management. Designed and implemented a user-friendly interface for: - Speaker and attendee registration - Session scheduling and tracking - Abstract submission and review - User authentication and authorization
